Why have you been given Siltac® or Silvex® ostomy seals?

These new silicone based ostomy seals may have been recommended to you for a number of reasons:

- You are experiencing leakage
- You have mild, moderate or severe skin problems around your stoma (even slightly red skin can still be a skin problem)
- You are having problems getting a perfect fit of your bag or moulding your current seal
- You are having problems removing the residue left on your skin when changing

What are Siltac® and Silvex® silicone ostomy seals?

Siltac® and **Silvex®** are ostomy seals made from a revolutionary new patented, Responsive Silicone® material that protects your skin completely, allows it to breathe, and leaves no residue or mess.

Why are they different from other ostomy products?

Current ostomy products are made from hydrocolloid. Hydrocolloid seals or rings absorb liquid (and body waste!) to keep it away from the skin.

Level of absorption therefore becomes one of the most important features of a hydrocolloid. This absorption of moisture (and body waste) is important for your current product to stick to wet skin.

We believe that having an adhesive containing faeces and urine on your skin for lengthy periods of time is not a hygienic or effective solution to protect against leakage or keep your skin healthy.

Trio **Siltac**® and **Silvex**® are soft silicone ostomy seals that work completely differently. They do not absorb moisture or body waste; for the first time you can have a clean and hygienic seal.

Trio **Siltac**® and **Silvex**® therefore **do not erode, do not leave any residue** and come off **cleanly and pain free**.

Comparing Siltac[®] and Silvex[®] to your current product

Siltac[®] and Silvex[®]

Current rings and bags

Always a perfect fit

No Residue

Painless removal

Moves with your stoma

More hygienic

Does not erode/ longer lasting

Instant adhesion - no waiting or warming

Allows your skin to breathe

How does it work?

01 Red/ sore peristomal skin due to contact of output with the skin

02 Siltac®/ Silvex® hugs your stoma to create a custom fit, always protecting the skin from harmful output

03 By offering complete protection and no scrubbing off residue the skin heals itself and remains healthy

How to use - Important!

Siltac® and **Silvex®** hug your stoma, so ensuring you have a firm and snug fit.

Do not use Siltac® and Silvex® in the same way as your current products. Please follow the below instructions.

- 01** Gently peel the edge of the seal using thumb and forefinger then carefully but firmly pull from the blister pack.

- 02** Stretch the seal over the stoma and allow it to retract back, forming a perfect seal around the stoma

- 03** Once the seal has retracted around the stoma, gently stick it to the skin

PLEASE NOTE: If you experience any problems fitting the seal try the next size down to achieve a more secure fit or contact the details on the reverse side of this leaflet.

Important: If there are any gaps between the seal and stoma, gently lift that part of the seal and allow it to hug the stoma, removing any gaps.

Available now – Ordering Information

Siltac® – Silicone ostomy seal

30 silicone cohesive seals (20mm-28mm) REF TR 1020

30 silicone cohesive seals (28mm-35mm) REF TR 1028

30 silicone cohesive seals (35mm-44mm) REF TR 1035

Silvex® – Silicone convex seal

10 silicone convex seals (20mm-30mm) REF 1020CX
